

You'd never cite a source you couldn't verify Neither would LeapSpace

LeapSpace is a research-grade AI. That means results come only from trusted, peer-reviewed literature, not the open web. So every result drawn from the **106+ million** Scopus records and more than **15 million** full-text articles and book content is presented transparently.

It's also publisher-neutral, drawing from abstracts and full text from publishers across the entire research ecosystem. And because results come with evidence, limitations, and context, your critical judgement stays where it belongs — with you.

**25% off a 12-month
individual subscription
for society members**

1. Visit elsevier.io/leapspace-soc25
2. Choose the yearly plan
3. Enter code **SOC25** at checkout
